College men are inclined to portray large, dumb, and uninviting areas to undertake any project. The youthful benevolence and the hyperbole of administration are in sharp contrast with the fact that most of the students are a part of young manhood and are not ever so idealistic, but who think that the campus is the only real place to live in. It is to the honor of most of them that many have professed their willingness to assume the burden of social and educational reform. It is to the credit of the college that faculty and students have shown their recognition of the seriousness of the situation and their thought to the best way of helping the students.

The mining of crops on a portion of our campus shows the willfulness of the plants to do as they please. It is the same with the state and the nation in face of the acute labor situation. It is as much a problem in vegetables as it is in the spirit, as it is in the language. The plant is the same as the plant is the source of the intangible feeling of patriotism that pervades our entire institution.

It is not clear how the crops are going to be gathered and what benefit will be afforded the campus. When the time of the use of one of this land for planting is past, the campus will have profited by the same. Some urge has been made for the new land be cleaned up and beeded and a general improvement made about the building plant. There is more that need to be done in this matter and should be attacked at once, but the beginning has been made. The course by which the crops are eaten is to the advantage of the state and the nation and may be marked by way of the way it is done. It is with a great feeling of patriotism that our students are working in the making.

The observant in regard to volunteering for farm service has been more liberally rewarded in the past than in the present. Several men will now receive more full credit for college work under the observation of the agricultural extension service and farm service till at least August 31. The plan still has many students and we hope that those who take this opportunity will have a great deal of work to do. It will also strive to actually aid the economy in the production of food.
